Externally Adjusted Modules

Adjustment

Adjustment of the tangential force Fu, can be made by adjusting the spring housing (9), so altering the spring force.

Ensure that on assembly any clearance between the driving ball and detent pocket is eliminated by adjusting the quantity of shims (8) under the clamp face of the module.

Note: Internal specifications may vary between sizes

Consult factory for special application

Externally Adjusted Disconnect Modules

Adjustment

Adjustment of the tangential force (F_u), can be made by removing the security cover 1 from the mounting flange and adjusting the screw 2, so altering the spring force.

This procedure discourages tampering by unauthorized personnel.

Brunel P/N	Tangential lb	Force F_u N	Dimensions in mm and inches								
			A	B	C	D	E	F	G	H	H ₁

Externally Adjusted Disconnect Modules

Features and Benefits

Very accurate release torque repeatability with minimal variation between static and dynamic release. Versatile installation allows for the torque limiter center section to be removed without the need to move the motor or gearbox.

Individual modules are preset to provide the required release torque. Any maintenance of the modules is a straightforward operation. A simple removal operation allows for module recalibration without having to replace the complete unit. By holding spare modules in stock already preset to the required release torque keeps downtime to an absolute minimum.

Manual reset of the torque limiter can only be carried out when the drive is at rest. Resetting is achieved by realigning the two halves of the unit and then lightly tapping each module fitted, with a soft mallet.

Lubrication of the unit is via easy access grease nipples. Proximity sensor targets are included to provide the means to switch off the drive after an overload occurs. While each torque limiter assembly is normally factory preset, if required site adjustments can be carried out, a setting chart with instructions is provided for this purpose.

P/N: JSE1-0025

Please note a security key is required and adjustment should only be carried out by an authorized person.

- Accurate release torque repeatability
- Simple fast manual re-engagement
- Low-cost maintenance
- The preferred protection for many extruder manufacturer
